Solution Architecture

Architecture Layers

1. **Presentation Layer** – ServiceNow Lightning UI (Incident Form, Import Set UI)
2. **Application Layer** – Import Sets, Transform Maps, Dot Walking, Dictionary Override
3. **Data Layer** – sys_user Table, Import Employee Staging Table, Incident Table
4. **Configuration Layer** – Form Layout, Field Mapping, Dictionary Entries

This layered architecture ensures modularity, scalability, and maintainability. Each layer independently handles its responsibility — from user interaction to data storage — making the system easy to manage and extend.
